MADE IN SWEDEN

Titac is the original composite fastener system, produced in Sweden since 1984. It was first developed for use in the logging industry, but has since then found uses in all sorts of industries. Amongst our customers we have painters, carpenters, boat builders, manufacturers of blades for wind turbines, roofers and builders of public baths. The main benefits are that they are gentle on cutting tools, they are not magnetic or conductive and they are resistive to most common chemicals. T-nails penetrate the material with less force than TU staples. TU staples provide more grip than T-nails.

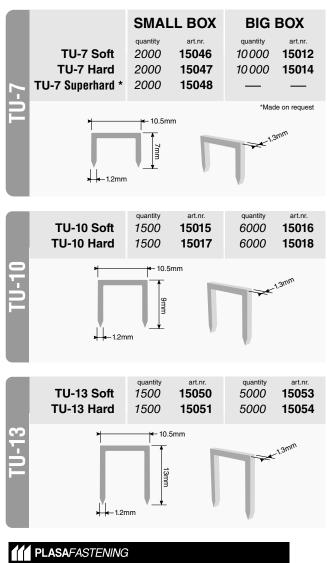

The TU staples comes mainly in two levels of hardness, extensively tested to perform well in different kinds of woods.

Soft

For woods such as spruce, pine, alder and cedar.

Hard

For harder woods such as birch, maple, beech or plywood.

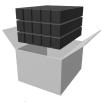

Plasa Fastening AB Verkstadsgatan 16 73338 Sala, Sweden

Tel: +46-(0)224-19191 Email: info@plasafastening.com Web: www.plasafastening.com The default colour is white. Other colours can be made on request.
